

# Goals and requirements

## Goals

1. The user must be able to:
  1. Transmit its position and the desired destination to the system, thus initiating the request of a taxi
  2. Access the system from both a in-browser and a mobile application (?)
  3. Receive the code and the ETA of the incoming taxi  
**Assumption:** in case the taxi queue is empty, the system will query the adjacent zones
  - 4.
